

Kadifa

(Tagetes patula, L.)

Kadifa je korisna u vrtu jer odbija štetnike. Ima jarke žute i narančaste cvjetove. Jednostavna je za uzgoj i brzo raste. Često se sadi uz povrće kao prirodna zaštita. Osim toga, kadifa može poboljšati kvalitetu tla smanjujući broj štetnih nematoda. Njezini cvjetovi se ponekad koriste i kao prirodna boja u prehrambenoj industriji.

Marigold is a useful plant in the garden because it helps repel pests. It has bright yellow and orange flowers, is easy to grow, and grows quickly. It's often planted alongside vegetables as a natural form of protection. In addition, marigolds can improve soil quality by reducing harmful nematodes. Their flowers are sometimes used as a natural coloring in the food industry as well.
